SHORT BIO

Giovanni Martinotti is a Full Professor of Psychiatry at the "G. d'Annunzio" University of Chieti–Pescara and a Lecturer in Psychiatry at LUMSA University and Saint Camillus International University in Rome. He is the author of more than 400 scientific publications and is listed in the SCOPUS database with an H-index of 68. For four consecutive years, he has been included by Stanford University among the world's top 2% most influential academic scientists.
He serves as Editor for several international journals, including Comprehensive Psychiatry and Current Neuropharmacology. He is currently a member of the National Board of the Italian Society of Psychiatry (SIP) and Chair of the Ecology, Psychiatry and Mental Health Section of the World Psychiatric Association (WPA).
His research focuses on addiction psychiatry, brain stimulation techniques, new psychoactive substances, treatment-resistant depression, and the emerging field of psychedelic-based therapeutics.

RESEARCH AND SCIENTIFIC PRODUCTION

Statement on research

My research endeavours have been primarily cantered around several core themes essential for a comprehensive understanding of addiction and the clinical and therapeutic dimensions linked to treatment-resistant depression and psychotic spectrum disorders.
Over the past five years, I have produced a substantial body of scholarly work with a specific focus on the treatment of mood disorders, leading significant trials in the realm of treatment-resistant depression, employing pioneering therapeutic approaches such as psychedelics and brain stimulation techniques. Furthermore, my research publications encompass various aspects of addiction, including alcohol, cannabis, cocaine, synthetic stimulant drugs, and gambling. I have placed particular emphasis on areas such as dual diagnosis, the complications and consequences associated with addiction, personality traits, internet-based substance use, and the application of psychometric methodologies. In the context of schizophrenia, my active involvement extends to neuroimaging investigations aimed at elucidating the neuropsychological foundations of linguistic abilities and suicidality, as well as the examination of grey matter networks within the prefrontal-thalamic-cerebellar regions. My research interests also encompass bipolar disorders, with a specific focus on the pharmacological treatment employing mood stabilizers, as well as the clinical assessment of individuals presenting with borderline personality traits. Lastly, I wish to underscore my distinct inclination toward integrating philosophy and anthropology within the field of psychiatry. My clinical approach is deeply grounded in phenomenology, wherein I view the empathetic relationship between the clinician and the individual undergoing therapy as the pivotal stage in the therapeutic process.
